EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.54 GPA - **12x Hackathon Winner** 2028

EXPERIENCES

AI Software Engineer Intern

May 2026 – Present

Aucctus AI

Toronto, Canada

- Designed from scratch a **2D sketches to 3D model** pipeline, optimized AI generation pipeline (gpt-image, Meshy, Veo, o4-mini) for **Fortune 500** clients, contributed to **30% platform-usage growth**
- Saved \$1.5K/month** on storage and retrieval by creating a file ingestion system via Gemini cache
- Built a seven-stage **Celery** pipeline that sends artifacts over **WebSockets**, cutting load time **by 80%**
- Implemented a source-grounding step to filter unverified claims, lower hallucinations from **10% to 1%**
- Migrated Hotjar to **PostHog** analytics, tracking **200+** product-wide events to evaluate users' engagement

Founder

May 2026 – Present

SOON

Toronto, Canada

- Established a community, bringing **45+ people** to a **\$3M+ mansion** to build projects for companies
- Achieved **1K+ monthly visitors** on our website, **\$15K+** sponsorships, **300K+** views across social media

AI/ML Intern

June 2026 – August 2026

KNOWIDEA

Toronto, Canada

- Built an **agent harness** with **Hermes LLM agent** to turn inbound emails into internal API calls
- Cut research token cost **\$1.8 → \$1.2/run** with per-subagent budgets, shared page cache, and finding dedup
- Created a URL validation gate for external quotes, filtered out false metrics, while **doubling** unique sources
- Enhanced **security** using HMAC webhooks, short-lived scoped tokens, and strict per-user data isolation

Software Engineer

Jan 2026 – Apr 2026

University of Toronto

Toronto, Canada

- Developed a real-time chat platform for in-lecture Q/A in a team of 6 using **Next.js/TypeScript**, and **Socket.IO**, enabling **100+ live users** per lecture session with **sub-100ms** message latency
- Integrated UofT SSO authentication for up to **80K+ students**, minimizing manual account creation
- Architected **Redis** caching and rate limiting system, reducing average API response latency **by 20%**
- Designed **PostgreSQL** schemas with Prisma for 8 models with indexes to improve query time **by 40%**

Software Tech Lead

Aug 2025 – Apr 2026

UofT Blueprint + Toronto Crisis Center

Toronto, Canada

- Led **8 developers**, organized development tickets to create a volunteer management app for **TRCC**
- Deployed Next.js/TypeScript app with **Docker** and **CI/CD** pipelines, cut deployment failures **by 50%**
- Enforced **80% test coverage** (Vitest), built integration test structure, and added Husky commit hooks

PROJECTS

Spark (hackathon 1st place) ⚡ Swift / ARKit / TypeScript / Next.js / Python / Three.js

- Built a rover that follows user and turns surroundings into an explorable **3D Gaussian-splat environment**, streaming LiDAR depth, RGB, camera poses, and audio over wifi to a local server for real-time reconstruction

KingView (hackathon winner) ⚡ TypeScript / Next.js / React.js / Node.js / Three.js

- Construction impact visualizer; selected to pitch a 3D urban planning platform to the **Mayor of Kingston**
- Made voice-to-3D object pipeline using NLP to let users design building, window, tree models via speech

Omni (hackathon 1st place at Google) ⚡ Python / FastAPI / Google ADK / Gemini

- Orchestrated a **5-layer agent RAG** pipeline using **Google ADK** to detect supply chain disruptions
- Designed a real-time perception layer using **7 live APIs** with LLM normalization to find disruption signals

TECHNICAL SKILLS

Languages: Python, JavaScript/Typescript, Java, C, SQL, HTML/CSS

Frameworks: Spring Boot, Node.js, Next.js, Django, React.js, FastAPI, Flask, Tailwind CSS, Vitest, JUnit, PyTest

Technologies: Git/Github, PostgreSQL, MongoDB, Supabase, AWS, Google Cloud Platform, Apache Kafka, Docker
