EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.54 GPA - **12x Hackathon Winner** 2028

EXPERIENCE

Software Engineer Intern

May 2026 – Present

Aucctus AI (full-time)

Toronto, Canada

- Reduced hallucinated claims from **10% to 1%** with a source-grounding stage checking claims against evidence
- Owned a **7-stage Celery pipeline**, turning product concepts into sketches, textured 3D models, AI advertisements, and a storyboarded video for **F500 clients**, increasing average session duration by **3 minutes**
- Cut generation runtime **60%** by parallelizing AI generation jobs with Celery groups, streaming over **WebSockets**
- Built version checkpoints and a watchdog reconciling stuck runs to a terminal state, with idempotent gates

Software Engineer Intern

May 2026 – Present

The Energy Bridge (part-time, remote)

Vienna, Austria

- Owned the platform as **sole engineer**, shipping **160+ changes** and **26 features** guarded by **800+ tests**
- Designed a RAG agent for **1K+ users**, routing **9 tools** through **3 parallel pgvector searches**, **<10s retrieval**
- Expanded multimodal uploads from **15MB to 2GB** through Gemini File API handoff, validating PPTX, image, CSV, and document ingestion across three product surfaces

AI/ML Intern

Jun 2026 – Aug 2026

KNOWIDEA (part-time)

Toronto, Canada

- Rebuilt a multi-provider deep-research agent that decomposes questions into sub-queries and verifies source quotes verbatim, tripling findings (**4 → 12**) and cutting evidence defects from **40% to ~0%**
- Replaced manual workflow with daily cron jobs: **3-provider search** into a verification funnel at **100% verbatim quote coverage**, to generate and send dashboard emails to clients, saving GTM team **20 minutes/day**
- Built an email-driven agent on **Modal** with HMAC-authenticated webhooks and short-lived, user-scoped tokens

PROJECTS

Football (hackathon winner) Python / NumPy / PyTorch / TypeScript / Next.js / Three.js

- Trained **13 footballer agents** from World Cup data (players/ball coordinates) to play football, ran live simulation at **60 fps**, with strategic formation, AI commentary, betting system, user-controlled view using **Meta Quest VR**
- Behaviour-cloned **3 movement MLPs** (54 egocentric features) across **44 recorded football matches**
- Finetuned **11 behaviour weights** by **Cross-Entropy Method** over thousands of headless matches
- Drove a **1,100-agent** prediction market simulation with an opt-in **SFT→GRPO** betting policy

Spark (hackathon 1st place) Swift / ARKit / TypeScript / Python / Three.js

- Built a user-following rover that reconstructs its surroundings as a **3D Gaussian-splat environment**, extending an **open source** project to stream LiDAR, depth, camera poses, and audio over **WiFi** for real-time reconstruction

Omni (hackathon 1st place at Google) Python / FastAPI / Google ADK / Gemini

- Orchestrated a **5-layer multi-agent RAG** pipeline with **Google ADK** to detect supply chain disruptions, normalizing **7 live APIs** with LLMs into a real-time perception layer
- Built a long-term memory system storing successful mitigation patterns to improve future recommendations

Big Brother Python / LangChain / MongoDB / Voyage AI / Neo4j / Beautiful Soup

- Designed a multi-model AI system with **LangChain** memory management and RAG to reduce hallucinations
- Ranked DOM elements with **MongoDB** and **Voyage AI** embeddings for voice-driven web navigation

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Java, C, HTML/CSS

AI/ML: RAG, LLM Agents, Google ADK, LangChain, pgvector, Voyage AI, Gemini / OpenAI APIs, NumPy, PyTorch

Frameworks: FastAPI, Celery, Django, Node.js, Next.js, React.js, Spring Boot, pytest, Vitest, JUnit

Technologies: PostgreSQL, MongoDB, Neo4j, Supabase, Modal, Docker, AWS, Google Cloud Platform, Git/GitHub
