EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.54 GPA - **12x Hackathon Winner** 2028

EXPERIENCE

Software Engineer Intern

May 2026 – Present

Aucctus AI (full-time)

Toronto, Canada

- Owned a **7-stage** asynchronous Celery job pipeline for **F500 clients**, orchestrating generation of sketches, textured 3D models, ads, and storyboarded video, increasing average session duration **by 3 minutes**
- Cut pipeline runtime **60%** by fanning out independent generation jobs as parallel Celery groups
- Built version checkpoints and a watchdog that reconciles stuck runs to a terminal state after a worker crash, with idempotent gates preventing duplicate work
- Migrated analytics from Hotjar to a two-plane **PostHog + Postgres** analytics stack across **94 files (205 event types, 101 routes)**, isolating tracking failures from request paths and masking PII
- Implemented a source-grounding step to filter unverified claims, lower hallucinations from **10% to 1%**

Software Engineer Intern

May 2026 – Present

The Energy Bridge (part-time, remote)

Vienna, Austria

- Reduced payload size **by 99.98%** for an interactive map visualizing **100K+ company locations**, **from 85MB to 18KB**, rendering at **<200ms**, by aggregating each viewport into server-side grid cells
- Guarded PRs with **800+ unit** and **Playwright E2E tests**, coverage thresholds, and **5 parallel CI jobs**
- Expanded multimodal uploads from **15MB to 2GB** through Gemini File API handoff, validating PPTX, image, CSV, and document ingestion across **3 product surfaces**

Software Engineer

Jan 2026 – Apr 2026

University of Toronto

Toronto, Canada

- Developed a real-time chat platform for in-lecture Q&A in a team of 6 using **Next.js/TypeScript** and **Socket.IO**, supporting **100+ live users** per session with **sub-100ms** message latency
- Architected **Redis** caching and rate limiting, reducing average API response latency **by 20%**
- Designed **PostgreSQL** schemas with Prisma for 8 models with indexes, improving query time **by 40%**
- Integrated UofT SSO authentication for **80K+ students**, minimizing manual account creation

Software Tech Lead

Aug 2025 – Apr 2026

UofT Blueprint + Toronto Crisis Center

Toronto, Canada

- Led **8 developers**, organized development tickets to create a volunteer management app for **TRCC**
- Deployed Next.js/TypeScript app with **Docker** and **CI/CD** pipelines, cut deployment failures **by 50%**
- Enforced **80% test coverage** (Vitest), built integration test structure, and added Husky commit hooks

PROJECTS

Vibe-Learn 🌀 Java / Spring Boot / Apache Kafka / MongoDB / Docker / Grafana

- Built an event-driven VS Code extension capturing real-time code changes, processing **1K+ events** per session
- Optimized queries using aggregation and producer pooling, reducing request latency **from 120ms to 2ms**
- Brought total latency down to **200ms** across **4 Spring Boot microservices** by implementing built-in caches

Image Gallery 🌀 Python / FastAPI / JavaScript / AWS

- Built a serverless image gallery on AWS EC2, S3, and DynamoDB for image and metadata storage
- Cut average load time **from 220ms to 35ms** with CloudFront caching; weekly cleanup via AWS Lambda

SkySync 🌀 Python / JavaScript / Express.js / Node.js / React.js / MongoDB

- Paired flights into **600K+** “bird formations” by proximity and schedule overlap, saving up to **4%** fuel/trip
- Handled **1.6M+** rows of flight data with MongoDB indexing, reducing query delay **from 15s to 500ms**

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, JavaScript, SQL, C, HTML/CSS

Frameworks: FastAPI, Django, Spring Boot, Node.js, Express.js, Celery, Socket.IO, Prisma, pytest, JUnit

Technologies: PostgreSQL, Redis, MongoDB, Kafka, AWS, Docker, GitHub Actions CI/CD, Grafana, Modal
