EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.54 GPA - **12x Hackathon Winner** 2028

EXPERIENCE

Software Engineer Intern

May 2026 – Present

Aucctus AI (full-time)

Toronto, Canada

- Owned a **7-stage Celery pipeline**, turning product concepts into sketches, textured 3D models, AI advertisements, and a storyboarded video for **F500 clients**, increasing average session duration **by 3 minutes**
- Cut runtime **by 60%** by parallelizing AI generation jobs with Celery groups, sending data over **WebSockets**
- Migrated Hotjar to a two-plane PostHog/Postgres analytics stack across **94 files**, instrumenting **205 event types** over **101 routes** while isolating tracking failures and masking sensitive customer data
- Built version checkpoints and a watchdog reconciling stuck runs to a terminal state, with idempotent gates
- Implemented a source-grounding step to filter unverified claims, lowering hallucinations from **10% to 1%**

Software Engineer Intern

May 2026 – Present

The Energy Bridge (part-time, remote)

Vienna, Austria

- Owned the platform, shipped **160+ product changes**, **66 pages**, **26 features** as the **sole engineer**
- Designed a RAG agent for **1K+ users**, routing **9 tools** through **3 pgvector searches** with **<10s retrieval**
- Reduced payload size **by 99.98%** for an interactive map visualizing **100K+ company locations**, **from 85MB to 18KB**, rendering at **<200ms**, by aggregating each viewport into server-side grid cells
- Guarded PRs with **800+ unit** and **Playwright E2E tests**, coverage thresholds, and **5 parallel CI jobs**

Founder, President

Feb 2026 – Present

SOON

Toronto, Canada

- Established a global community, bringing **50+ people** to a **\$3M+ mansion** to build projects
- Achieved **1K+ monthly website visitors**, **\$25K+** sponsorships, **300K+** views across social media

AI/ML Intern

Jun 2026 – Aug 2026

KNOWIDEA (part-time)

Toronto, Canada

- Built an email-driven agent on Modal with HMAC-authenticated webhooks and short-lived, user-scoped tokens
- Replaced manual workflow with daily cron jobs: **3-provider search** into a verification funnel at **100% verbatim quote coverage**, to generate and send dashboard emails to clients, saving GTM team **20 minutes/day**
- Rebuilt a research pipeline that split questions into sub-queries across multiple providers and verified source quotes, tripling average findings from **4 to 12** while reducing evidence defects from **40% to near 0%**

Software Engineer

Jan 2026 – Apr 2026

University of Toronto

Toronto, Canada

- Developed a real-time chat platform for in-lecture Q&A in a team of 6 using **Next.js/TypeScript** and **Socket.IO**, enabling **100+ live users** per lecture session with **sub-100ms** message latency
- Integrated UoT SSO authentication for up to **80K students**, minimizing manual account creation
- Architected **Redis** caching and rate limiting system, reducing average API response latency **by 20%**
- Designed **PostgreSQL** schemas with Prisma for 8 models with indexes to improve query time **by 40%**

PROJECTS

Spark (hackathon 1st place) Swift / ARKit / TypeScript / Python / Three.js

- Built a rover that follows user, turns surroundings into **3D Gaussian-splat environment**, extended **open source** project to stream LiDAR, depth, camera poses, and audio over WiFi to local server for real-time reconstruction

Football (hackathon winner) Python / NumPy / TypeScript / Next.js / Three.js / ElevenLabs

- Trained **13 footballer agents** from World Cup data (players/ball coordinates) to play football, ran live simulation at **60 fps**, with strategic formation, AI commentary, betting system, user-controlled view using **Meta Quest VR**

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, SQL, HTML/CSS

Frameworks: Spring Boot, Node.js, Next.js, Django, React.js, FastAPI, Flask, Tailwind CSS, Vitest, JUnit, pytest

Technologies: Git/GitHub, PostgreSQL, MongoDB, Supabase, AWS, Google Cloud Platform, Apache Kafka, Docker
