EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.54 GPA - **13x Hackathon Winner** 2028

EXPERIENCE

Software Engineer Intern May 2026 – Present

Aucctus AI (full-time) | Python, Django, TypeScript, React.js, PostgreSQL, Gemini Toronto, Canada

- Owned an agentic pipeline (**Gemini-driven**) for **F500 clients**, turning product concepts into sketches, textured **3D models**, AI storyboards and advertisements, pushed **2 products** from ideation to prototype phase
- Cut runtime **by 60%** by parallelizing AI generation jobs with **Celery** groups, sending data over **WebSockets**
- Migrated **Hotjar** to a two-plane **PostHog/Postgres** analytics stack across **94 files**, instrumenting **205 event types** over **101 routes** while isolating tracking failures and masking sensitive customer data
- Implemented a source-grounding step to filter unverified claims, lowering hallucinations from **10% to 1%**

Software Engineer Intern May 2026 – Present

The Energy Bridge (part-time) | TypeScript, Next.js, React.js, Supabase, Gemini Vienna, Austria

- Designed a RAG agent for **1K+ users**, routing **9 tools** through **3 pgvector searches** with **<10s retrieval**
- Expanded multimodal upload size **by 130%** with **Gemini File API**, enabled image/document/video analysis
- Reduced payload size **from 85MB to 18KB** for an interactive map visualizing **100K+** company locations, rendering at **<200ms**, using precomputed **PostgreSQL** grids and indexed bounds queries

Founder, President Feb 2026 – Present

SOON - Something Out Of Nothing Toronto, Canada

- Founded a global hackathon community, bringing **50+ people** to **private mansions** to build projects
- Achieved **3K+ monthly website visitors**, **\$30K+** sponsorships, **350K+** views across social media

AI/ML Intern Jun 2026 – Aug 2026

KNOWIDEA (part-time) | Python, FastAPI, Modal, LangGraph, TypeScript, Next.js Toronto, Canada

- Built a **Modal** email-agent harness with **HMAC-verified webhooks** and 60-second, user-scoped tokens
- Replaced manual work with daily cron jobs: **Exa/Tavily/Gemini** searches into a verification funnel at **100% verbatim quote coverage**, to generate and send emails to clients, saving GTM team **20 minutes/day**
- Rebuilt a research pipeline that split questions into sub-queries across multiple providers and verified source quotes, tripling average findings from **4 to 12** while reducing evidence defects from **40% to near 0%**

Software Engineer Jan 2026 – Apr 2026

University of Toronto | TypeScript, Next.js, Socket.IO, Prisma, PostgreSQL Toronto, Canada

- Developed a real-time chat platform for in-lecture Q&A in a team of 6 using **Next.js/TypeScript** and **Socket.IO**, enabling **100+ live users** per lecture session with **sub-100ms** message latency
- Integrated UofT SSO authentication for up to **80K students**, minimizing manual account creation
- Architected **Redis** caching and rate limiting system, reducing average API response latency **by 20%**

PROJECTS

ChatGPU (hackathon winner) 🏆 | Python, FastAPI, TypeScript, React.js, Docker, Sentry

- Designed a distributed compute platform that allows macbooks/windows/phones to run ML jobs and simulations
- Built a **Sentry** pipeline that joins each fixed issue to its logs, spans, and code diff into an **AGI training set** for the GPU optimization agent (improve cross-chip code migration speed **by 40%**)

Football (hackathon winner) 🏆 | Python, NumPy, TypeScript, Next.js, Three.js, WebXR, ElevenLabs

- Trained **13 footballer agents** from World Cup data (players/ball coordinates) to play football, ran live simulation at **60 fps**, with strategic formation, AI commentary, betting system, user-controlled view using **Meta Quest VR**
- Behaviour-cloned **3 movement MLPs** (54 egocentric features) across **44 recorded football matches**

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, C, SQL, HTML/CSS

Frameworks: Spring Boot, Node.js, Next.js, Django, React.js, FastAPI, Flask, Tailwind CSS, Vitest, JUnit, pytest

Technologies: Git/GitHub, PostgreSQL, MongoDB, Supabase, AWS, Google Cloud Platform, Apache Kafka, Docker
