EDUCATION

University of Toronto — Computer Science - Bachelor of Science - 3.58 GPA - **9x Hackathon Winner** 2028

EXPERIENCES

AI Software Engineer Intern

May 2026 – Present

Aucctus AI

Toronto, Canada

- Ship a new feature that transforms business concepts into sketches, 3D models, and AI-generated marketing shots/videos, boosting **Fortune 500 client** satisfaction, reducing design time **by 200%**
- Integrate **4 AI services** (gpt-image, Meshy, Veo, o4-mini) behind **11 REST endpoints** with fallbacks
- Architect a **7-stage Celery** pipeline to stream artifacts over **WebSockets**, cutting load time **by 80%**
- Create a PDF ingestion system via Gemini cache, **saving \$1.5K/month** on storage and retrieval pipeline

Founder & President

Feb 2026 – Present

SOON Hackathon

Toronto, Canada

- Establish a community, bringing **45+ people** to a **\$3M+ mansion** to build projects for companies
- Achieve **400+ active platform users**, **\$7K+** in sponsorships, **300K+ views** across social media
- Build a local **Ollama**, **Llama 3.1** model with **RAG** for team messages, indexing with **sub-150ms** retrieval

Software Engineer

Jan 2026 – Apr 2026

University of Toronto

Toronto, Canada

- Developed a real-time chat platform for in-lecture Q/A in a team of 6 using **Next.js/TypeScript**, and **Socket.IO**, enabling **100+ live users** per lecture session with **sub-100ms** message latency
- Integrated UofT SSO authentication for up to **80K+ students**, minimizing manual account creation
- Architected a **Redis** layer with 3 databases for caching and rate limiting, reducing payload **by 70%**
- Designed **PostgreSQL** schemas with Prisma for 8 models with indexes to improve query time **by 40%**

Software Tech Lead

Aug 2025 – Apr 2026

UofT Blueprint + Toronto Crisis Center

Toronto, Canada

- Led **8 developers**, organized development tickets to create a volunteer management app for **TRCC**
- Deployed Next.js/TypeScript app with **Docker** and **CI/CD** pipelines, cut deployment failures **by 50%**
- Enforced **80% test coverage** (Vitest), built integration test structure, and added Husky commit hooks

PROJECTS

Omni (hackathon 1st place) 🏆 TypeScript / React.js / Python / FastAPI / Google ADK / Gemini

- Orchestrated a **5-layer agent RAG** pipeline using **Google ADK** to detect supply chain disruptions
- Designed a real-time perception layer using **7 live APIs** with LLM normalization to find disruption signals

KingView (hackathon 1st place) 🏆 TypeScript / Next.js / React.js / Node.js / Three.js

- Won City of Kingston challenge; selected to pitch a 3D urban planning platform to the **Mayor of Kingston**
- Made voice-to-3D object pipeline using NLP to let users design building, window, tree models via speech
- Allowed models to be placed in existing map, visualized construction noise to score population impact

Vibe-Learn 🏆 Java / Spring Boot / Apache Kafka / MongoDB / Docker / Grafana

- Built event-driven VS Code extension capturing real-time code changes, processing **1K+ events per session**
- Lowered to **200ms total latency** across **4 Spring Boot microservices** by implementing built-in caches

SkySync 🏆 Python / JavaScript / Express.js / Node.js / React.js / MongoDB

- This app identifies aircraft groups that can fly in "bird formations" to reduce fuel, saving up to **4%/trip**
- Designed a flight-pairing algorithm to find **600K+ plane formations** by proximity and schedule overlap
- Handled **1.6M+ rows of flight data** with MongoDB indexing, reducing query delay **from 15s to 500ms**

TECHNICAL SKILLS

Languages: Python, JavaScript/Typescript, Java, C, SQL, HTML/CSS

Frameworks: Spring Boot, Node.js, Next.js, Django, React.js, FastAPI, Flask, Tailwind CSS, Vitest, JUnit, PyTest

Technologies: Git/Github, PostgreSQL, MongoDB, Supabase, AWS, Google Cloud Platform, Apache Kafka, Docker

Coding Tools: VS Code, IntelliJ, Pycharm, Gemini CLI, Cursor, Claude
